

CMMI L2 AND L3 CAPABILITY MATURITY MODEL INTEGRATION

CMMI is a proven set of global best practices that address key capabilities and common business challenges in quality, engineering, business planning and resilience, management of the workforce, and more. It is a process level improvement, training and appraisal program.

Capability Maturity Model Integration (CMMI) helps organizations understand their current level of capability and performance in the context of their own business objectives compared to best practice industry benchmarks.

Your organization can be appraised at five different maturity levels for processes: initial, managed, defined, quantitatively managed and optimizing. The most common levels we see are CMMI Maturity Level 2 or Level 3 for development/service.

CMMI BENEFITS

- Improved business performance
- Leverage best practices
- Build Agile resiliency and scale
- Performance-oriented appraisal method improves reliability
- Improved customer satisfaction
- Increased employee engagement
- Improved bottom line

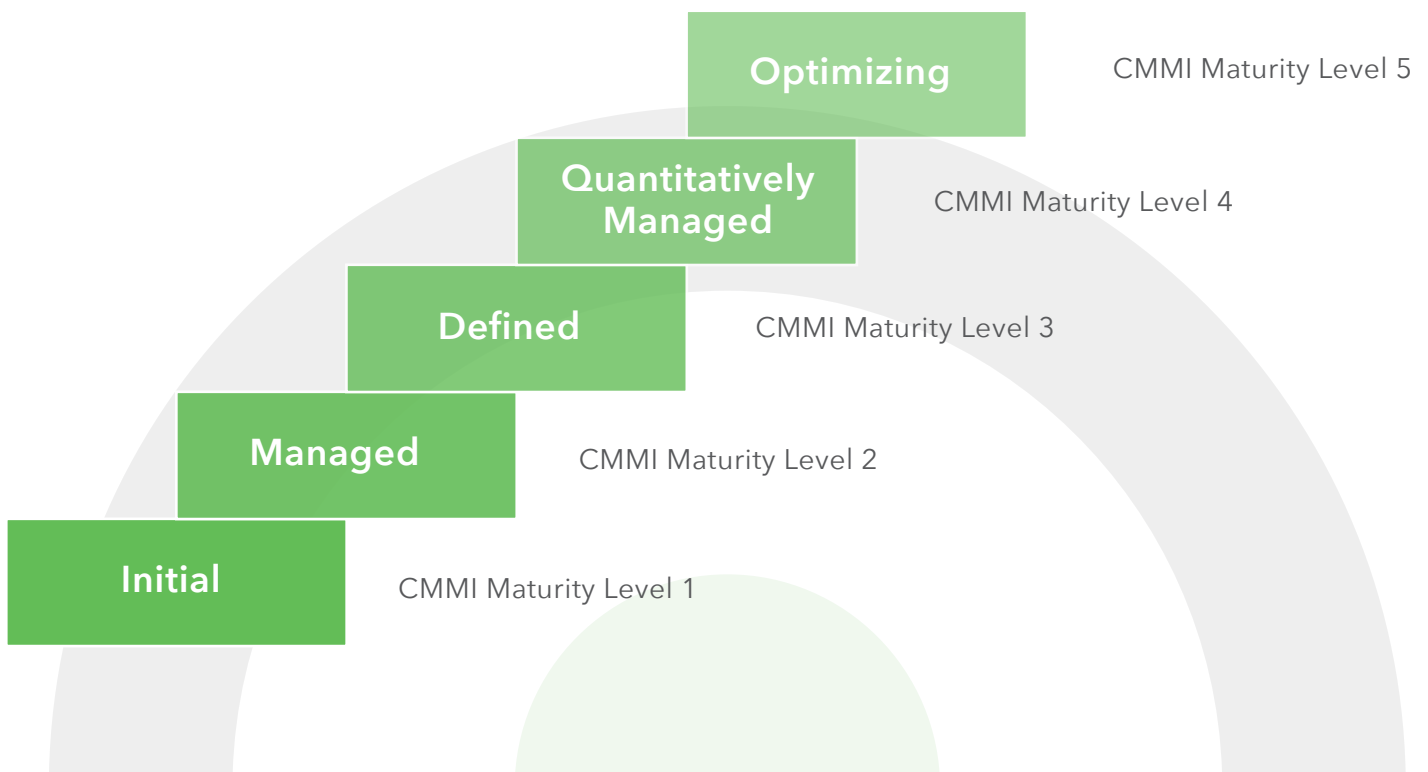

CMMI APPRAISAL

A CMMI appraisal is an activity that identifies the strengths and weaknesses of your business processes and how they relate to CMMI best practices. A Lead Appraiser conducts your appraisal once Core Business Solutions assists in you being prepared.

Once you have achieved Level 2, you can progress to Maturity Level 3. In addition to the Maturity Level there are 3 classes of SCAMPI appraisals: SCAMPI A, B, and C. The appraisals are all part of becoming compliant to CMMI.

CMMI MATURITY LEVELS
